## Introduction

This report is based on findings from a nationally representative survey – *Climate Change in the American Mind* – conducted by the [Yale Program on Climate Change Communication \(climatecommunication.yale.edu\)](http://climatecommunication.yale.edu) and the [George Mason University Center for Climate Change Communication \(climatechangecommunication.org\)](http://climatechangecommunication.org). Interview dates: November 28 – December 11, 2018. Interviews: 1,114 Adults (18+). Average margin of error +/- 3 percentage points at the 95% confidence level. The research was funded by the 11th Hour Project, the Endeavor Foundation, the Energy Foundation, the Grantham Foundation, and the MacArthur Foundation.

## Executive Summary

This report documents a continued upward trend in Americans' concern about global warming, as reflected in several key indicators tracked since 2008, including substantial increases in Americans' certainty that global warming is happening and harming people in the United States now. The proportion of Americans who are very worried about global warming has more than tripled since its lowest point in 2011. Increasing numbers of Americans say they have personally experienced global warming and that the issue is personally important to them. Notable findings include:

- Seven in ten Americans (73%) think global warming is happening, an increase of ten percentage points since March 2015. Only about one in seven Americans (14%) think global warming is not happening. Americans who think global warming is happening outnumber those who think it isn't by more than a 5 to 1 ratio.
- Americans are also increasingly certain that global warming is happening – 51% are "extremely" or "very" sure it is happening, an increase of 14 percentage points since March 2015, matching the highest level since 2008. By contrast, far fewer – 7% – are "extremely" or "very sure" global warming is not happening.
- About six in ten Americans (62%) understand that global warming is mostly human-caused. By contrast, about one in four (23%) say it is due mostly to natural changes in the environment.
- More than half of Americans (57%) understand that most scientists agree that global warming is happening, the highest level since 2008. However, only one in five (20%) understand how strong the level of consensus among scientists is (i.e., that more than 90% of climate scientists have concluded that human-caused global warming is happening).
- About seven in ten Americans (69%) say they are at least "somewhat worried" about global warming. About three in ten (29%) are "very worried" about it – the highest level since our surveys began in 2008.
- About seven in ten Americans are "interested" in global warming (69%). Majorities also feel "disgusted" (53%) and/or "helpless" (51%). Nearly half are "hopeful" (48%).
- Few Americans think it's too late to do anything about global warming (14%).
- Nearly half of Americans (46%) say they have personally experienced the effects of global warming, an increase of 15 percentage points since March 2015.
- Nearly half of Americans (48%) think people in the United States are being harmed by global warming "right now." The proportion who believe people are being harmed "right now" has increased by 16 percentage points since March 2015 and by nine points since our previous survey in March 2018.
- About half or more Americans think they (49%), their family (56%), and/or people in their community (57%) will be harmed by global warming. Even more think global warming will harm people in the U.S. (65%), the world's poor (67%), people in developing countries (68%), plant and animal species (74%), and/or future generations of people (75%).
- About seven in ten Americans (72%) say the issue of global warming is either "extremely," "very," or "somewhat" important to them personally, while only about three in ten (28%) say it is either "not too" or "not at all" personally important. The proportion who say it is personally important has increased by 16 percentage points since March 2015, and by nine points since our previous survey in March 2018.

- About four in ten Americans (41%) say they discuss global warming with family and friends "often" or "occasionally," an increase of 15 percentage points since March 2015. However, more say they "rarely" or "never" discuss it (59%), although this reflects a 15-point decrease since March 2015.
- More than half of Americans (56%) say they hear about global warming in the media at least once a month, an increase of 13 percentage points since our previous survey in March 2018.
- Fewer than half of Americans perceive a social norm in which their friends and family expect them to take action on global warming. Forty-six percent think it is at least moderately important to their family and friends that they take action (an injunctive norm), and four in ten (40%) say their family and friends make at least a moderate effort to reduce global warming (a descriptive norm).
- About two in three Americans (65%) think global warming is affecting weather in the United States, and three in ten think weather is being affected "a lot" (32%). About half think global warming made the 2018 wildfires in the Western U.S. (50%) and/or hurricanes Florence and Michael (49%) worse.
- A majority of Americans are worried about harm from extreme events in their local area including extreme heat (61%), flooding (61%), droughts (58%), and/or water shortages (51%).

## 1. Global Warming Beliefs

### 1.1. Seven in ten Americans think global warming is happening.

Americans who think global warming is happening outnumber those who think it isn't by more than 5 to 1.

About seven in ten Americans (73%) think global warming is happening, the highest percentage since our surveys began in 2008. By contrast, only about one in seven Americans (14%) think global warming is not happening.

**1.2. Half of Americans are "extremely" or "very" sure global warming is happening. Fewer than one in ten are as sure it isn't happening.**

Fifty-one percent of Americans are either "extremely" or "very" sure global warming is happening. Far fewer – 7% – are "extremely" or "very sure" global warming isn't happening.

The percentage who are sure global warming is happening has risen steadily over the past three years and now matches the highest level since our surveys began in 2008.

### 1.3. About six in ten Americans think global warming is mostly human-caused.

The 2018 U.S. National Climate Assessment (written and reviewed by hundreds of climate experts over the course of four years) states: "Greenhouse gas emissions from human activities are the only factors that can account for the observed warming over the last century; there are no credible alternative human or natural explanations supported by the observational evidence" (pp. 39-40).<sup>1</sup>

A majority of Americans (62%) understand that global warming is mostly human-caused, the highest level since our surveys began in 2008. By contrast, about one in four (23%) say it is due mostly to natural changes in the environment, the lowest level since our surveys began.

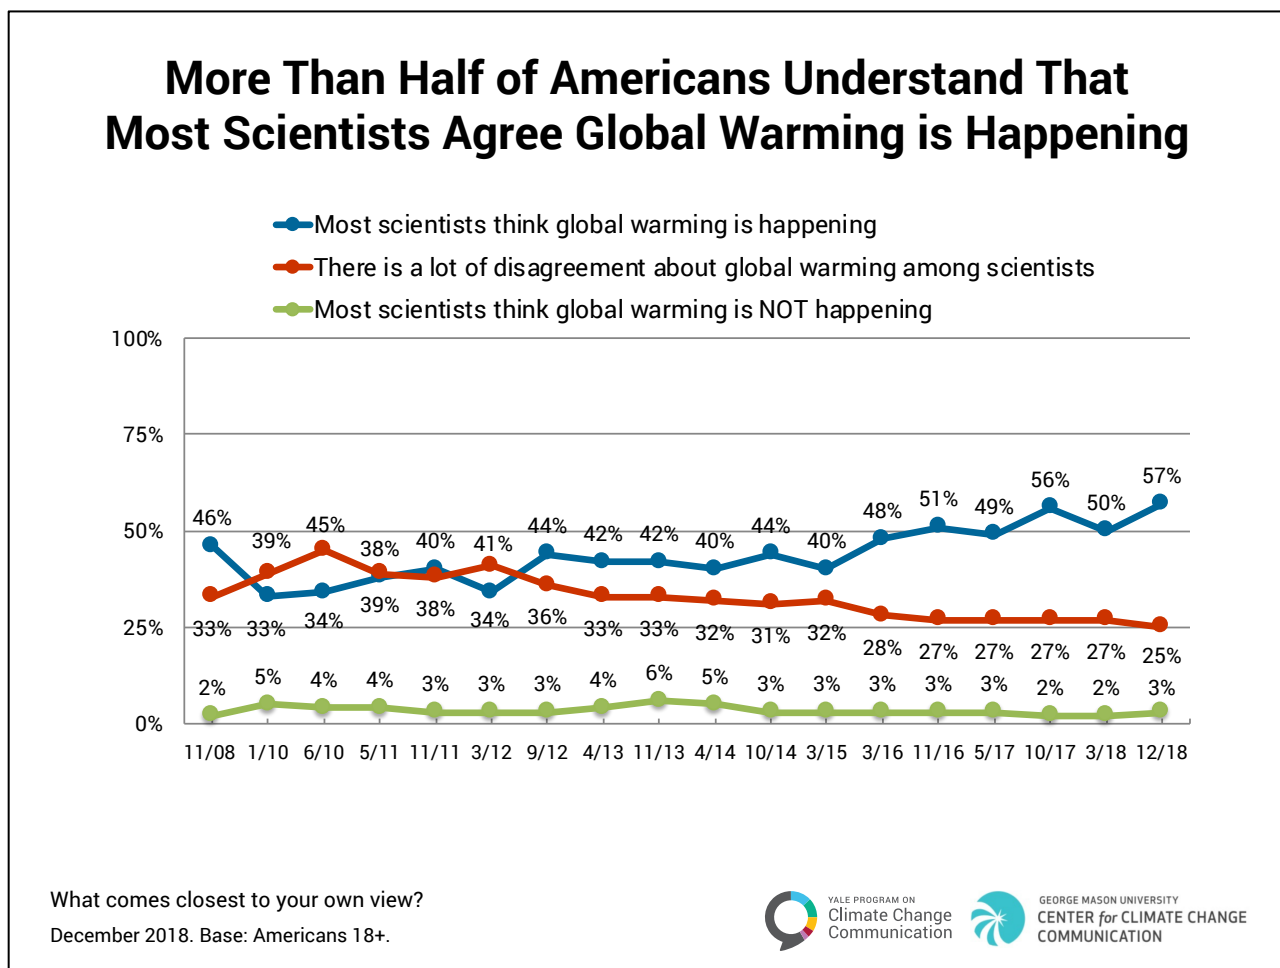

<sup>1</sup> <https://nca2018.globalchange.gov/>

### 1.4. More than half of Americans understand that most scientists agree global warming is happening.

A review by John Cook and colleagues<sup>2</sup> found that six independent, peer-reviewed studies about the extent of the scientific consensus about global warming reached similar conclusions: between 90% and 100% of climate scientists are convinced that human-caused global warming is happening. The most rigorous of these studies found that 97% of climate scientists are convinced that human-caused global warming is happening.

Now, more than half of Americans (57%) understand most scientists agree that global warming is happening, the highest level since our surveys began in 2008, and a large increase (+24 percentage points) since the lowest level for this response in 2010. By contrast, one in four Americans (25%) think there is a lot of disagreement among scientists about whether or not global warming is happening, the lowest level since our surveys began. Very few Americans (3%) think most scientists agree that global warming is *not* happening.

<sup>2</sup> Cook, J., Oreskes, N., Doran, P. T., Anderegg, W. R. I., Verheggen, B., Maibach, E. W., Carlton, J. S., Lewandowski, S., Skuce, A. G., Green, S. A., Nuccitelli, D., Jacobs, P., Richardson, M., Winkler, B., Painting, R., & Rice, K. (2016). Consensus on consensus: A synthesis of consensus estimates on human-caused global warming. *Environmental Research Letters* 11(4). doi: 10.1088/1748-9326/11/4/048002

### 1.5. Only one in five Americans understand that almost all climate scientists (more than 90%) have concluded human-caused global warming is happening.

Although the majority of Americans now understand that most scientists think global warming is happening, fewer understand just how strong the level of consensus among scientists is. Only one in five Americans (20%) understand that nearly all climate scientists (more than 90%) are convinced that human-caused global warming is happening, an increase of five percentage points since our previous survey in March 2018. About the same proportion of Americans (22%) say they "don't know" what percentage of climate scientists think human-caused climate change is happening, an eight point decrease since March.<sup>3</sup>

Public misunderstanding of the scientific consensus – which has been found in each of our surveys since 2008 – has significant consequences. Other research has identified public understanding of the scientific consensus as an important "gateway belief" that influences other important beliefs (i.e., global warming is happening, human-caused, and worrisome) and support for action.<sup>4</sup>

## Only One in Five Americans Understand That Almost All Climate Scientists (More Than 90%) Have Concluded Human-Caused Global Warming Is Happening

To the best of your knowledge, what percentage of climate scientists think that human-caused global warming is happening? Please click on the slider bar below to indicate your answer. You can slide the indicator to the position that best describes your opinion. If the slider does not work, you can enter a number in the number box.

December 2018. Base: Americans 18+ (n=1,114).

COMMUNICATION

<sup>3</sup> Respondents were asked to estimate the percentage of climate scientists who have concluded that human-caused global warming is happening by moving a simulated "slider bar" which appeared on the screen of their computer. This slider allowed respondents to move the marker from "0%" on the left to "100%" on the right, or to any whole number between the two. A "don't know" response option appeared below the slider bar.

## 2. Emotional Responses to Global Warming

### 2.1. About seven in ten Americans are at least “somewhat worried” about global warming, with about three in ten “very worried.”

About seven in ten Americans (69%) say they are at least “somewhat worried” about global warming, the highest level since our surveys began in 2008, and an increase of seven percentage points since our previous survey in March 2018. About three in ten Americans (29%) are “very worried,” an eight-point increase since March.

**2.2. About seven in ten Americans are "interested" in global warming, but fewer feel other emotions.**

When asked how strongly they feel various emotions when they think about global warming, about seven in ten Americans (69%, +7 percentage points since March 2018) say they feel very or moderately "interested" in it, followed by those who say they feel "disgusted" (53%, +6 points), "helpless" (51%, +6 points), "afraid" (49%, +11 points), "angry" (48%, +9 points), "hopeful" (48%, +7 points), and/or "outraged" (43%, +6 points).

Emotional reactions to global warming may be felt for different reasons, and signify different meanings, depending on an individual’s beliefs about global warming. For instance, someone who thinks global warming is happening may feel "disgusted" about it for different reasons than someone who thinks global warming is *not* happening. For that reason, we looked separately at people’s emotional reactions to global warming depending on whether they think it *is* happening, don’t know whether it is happening, or think it is *not* happening.

About eight in ten (82%) Americans who think global warming is happening say they are very or moderately "interested" in it. Half, or more, feel negative emotions, including "disgusted" (63%), "helpless" (62%), "afraid" (62%), "angry" (58%), and/or "outraged" (54%). About half feel "hopeful" (52%). Conversely, relatively few Americans who think global warming isn’t happening feel any emotions about it, the most common being “hopeful” (34%).

## A Majority of Americans Who Think Global Warming is Happening Feel A Range of Emotions

How strongly do you feel each of the following emotions when you think about the issue of global warming?

December 2018. Base: Americans 18+ (n=1,114).

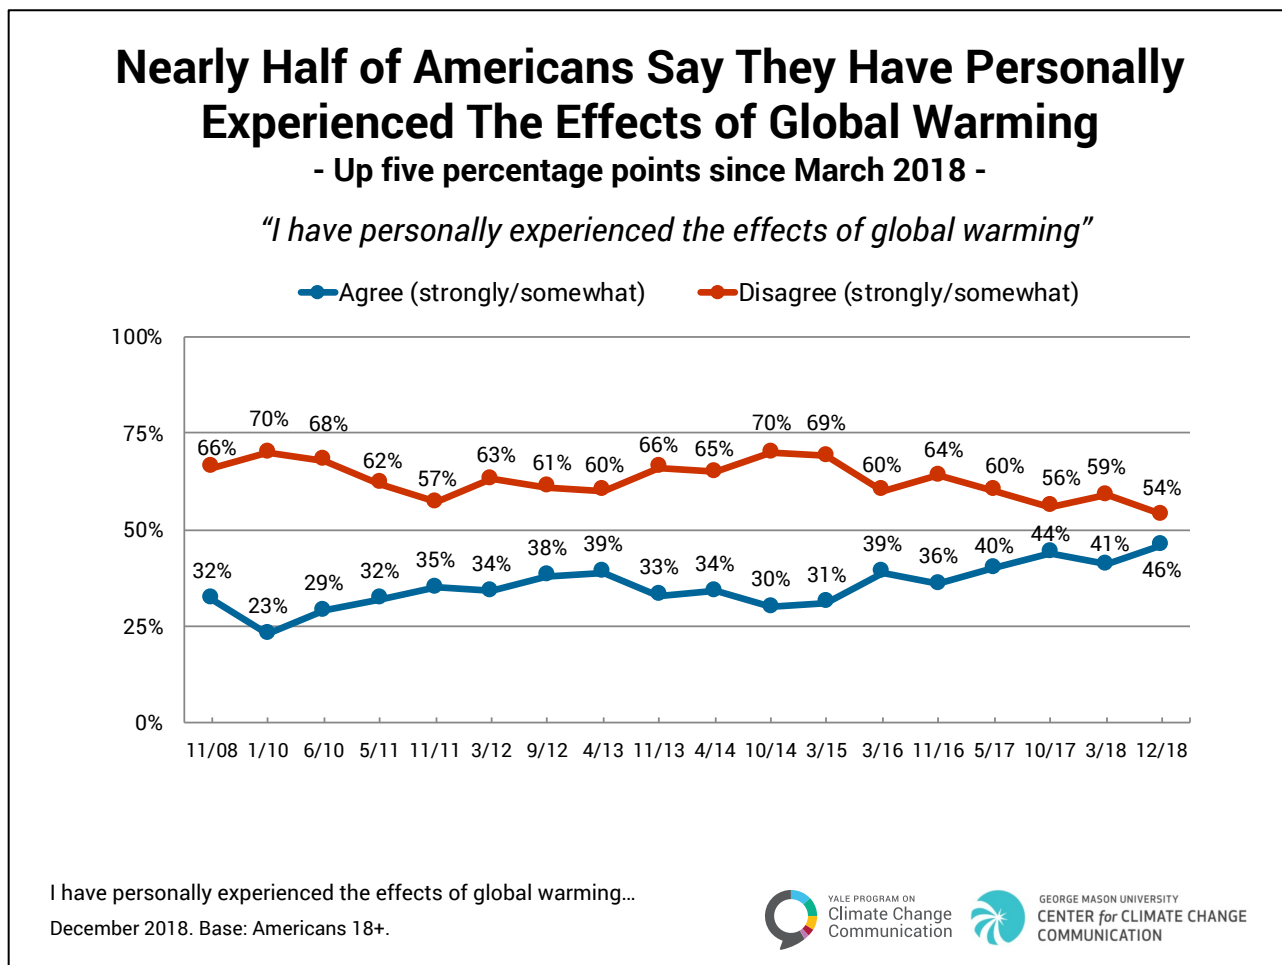

### 3. Perceived Risks of Global Warming

#### 3.1. Nearly half of Americans say they have personally experienced the effects of global warming.

Nearly half of Americans (46%) say they have personally experienced the effects of global warming, while slightly more than half (54%) say they have not.

The percentage of Americans who say they have personally experienced the effects of global warming has increased by five percentage points since our previous survey in March 2018, and is at its highest level since our surveys began in 2008.

**3.2. Nearly half of Americans think people in the U.S. are being harmed "right now" by global warming.**

Nearly half of Americans (48%) think people in the U.S. are being harmed by global warming "right now," the highest level since our surveys began in 2008, and an increase of nine percentage points since our previous survey in March 2018.

**Nearly Half of Americans Think People in the U.S. Are Being Harmed "Right Now" by Global Warming**

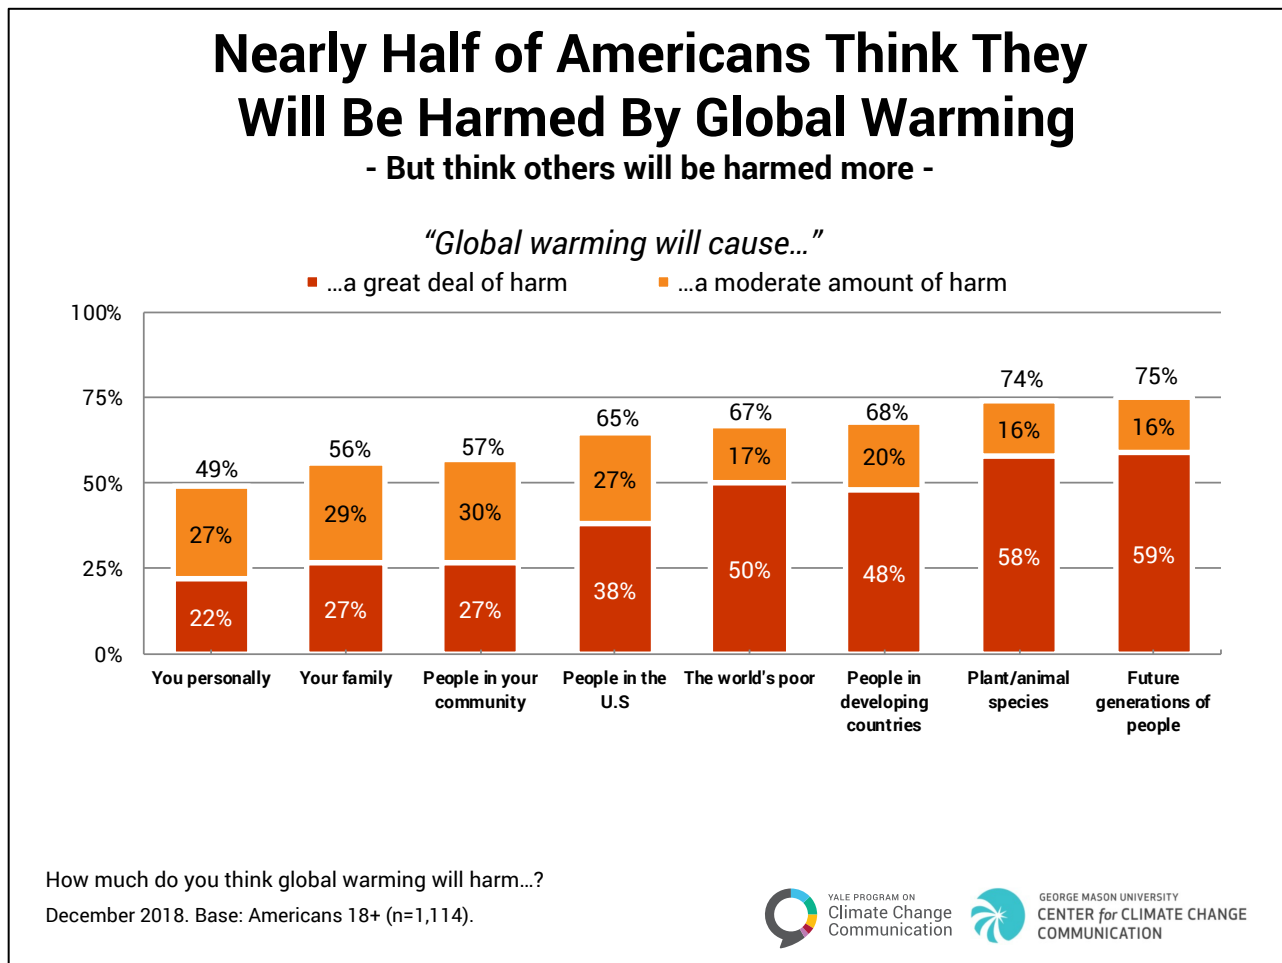

When do you think global warming will start to harm people...?  
 December 2018. Base: Americans 18+.

### 3.3. Nearly half of Americans think they will be harmed by global warming, and they think others will be harmed more.

Many Americans understand that global warming will cause harm, and that understanding has increased since our previous survey in March 2018. Americans are most likely to think that future generations of people (75%, +4 percentage points since March) and plant and animal species (74%, +3 points) will be harmed a "great deal" or a "moderate amount" by global warming. Majorities also think people in developing countries (68%, +6 percentage points since March), the world's poor (67%, +4 points), people in the U.S. (65%, +7 points), people in their community (57%, +8 points), and/or their family (56%, +9 points) will be harmed. Nearly half (49%, +7 points) think they themselves will be harmed.

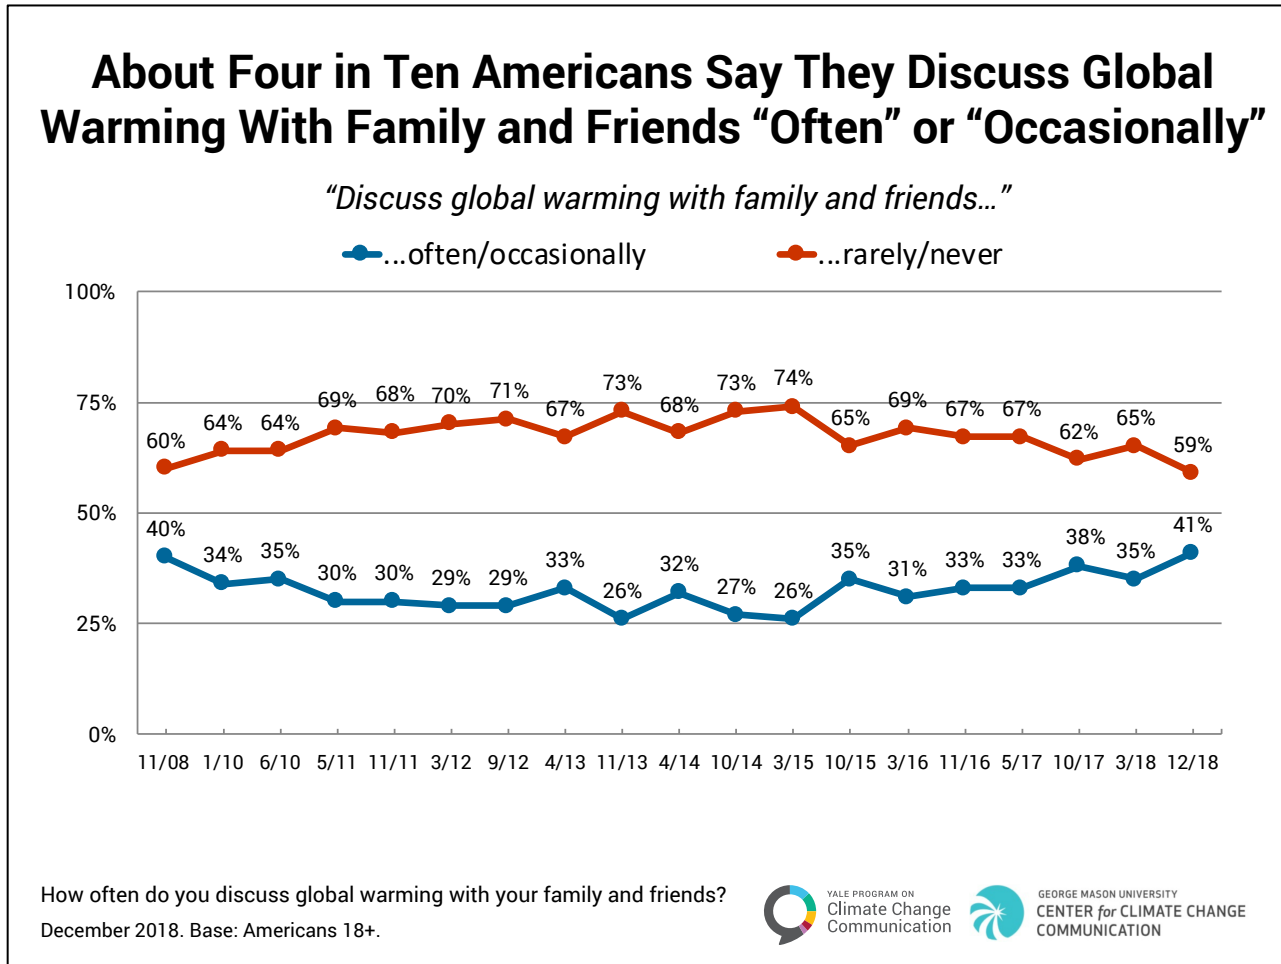

## 4. Personal and Social Engagement with Global Warming

### 4.1. About four in ten Americans say they discuss global warming with family and friends "often" or "occasionally."

About four in ten (41%) Americans say they discuss global warming with family and friends at least occasionally. Although the majority of Americans (59%) rarely or never discuss global warming with family and friends, the percentage who do discuss global warming is six points higher than in March 2018, and is at its highest level since our surveys began in 2008.

**4.2. A majority of Americans hear about global warming in the media at least once a month; about one in four hear people they know talking about it at least once a month.**

A majority of Americans (56%) say they hear about global warming in the media once a month or more frequently, an increase of 13 percentage points since our previous survey in March 2018. About one in four Americans (27%, a 10-point decrease since March) say they hear about it in the media only several times a year or less, and 6% say they never hear about it.

Only one in four Americans (26%, +6 points) say they hear people they know talking about global warming once a month or more. In contrast, 43% say they hear people they know talking about it only several times a year or less, and about one in five (22%) say they never hear people they know talk about global warming.

**4.3. The issue of global warming is personally important to about seven in ten Americans.**

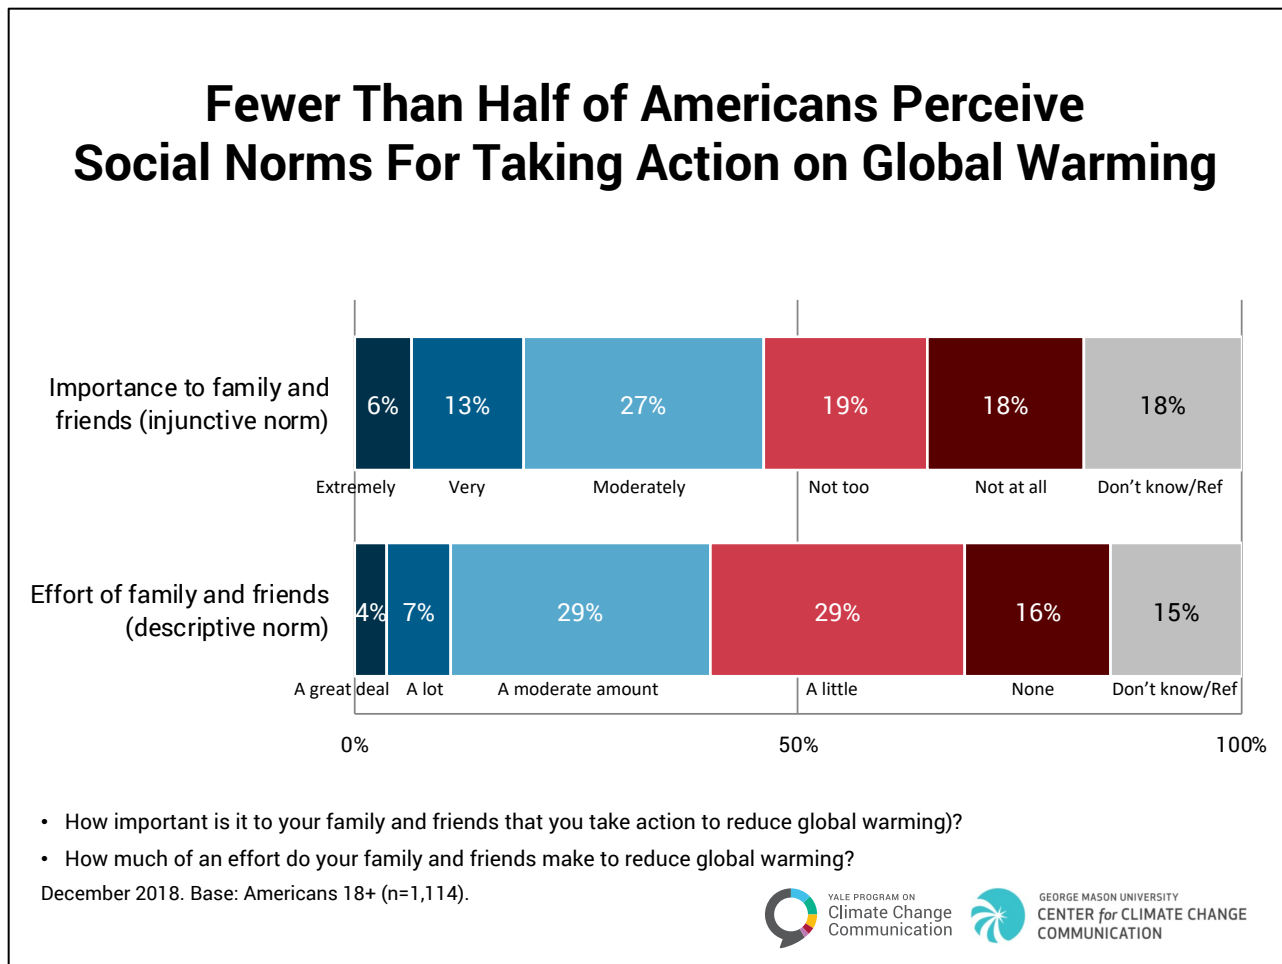

About seven in ten Americans (72%, +9 percentage points since our previous survey in March 2018) say the issue of global warming is either "extremely" (16%, +6 points), "very" (24%, +6 points), or "somewhat" (32%, -3 points) important to them personally, the highest level since our surveys began in 2008. About one in four (28%, -9 points) say global warming is either "not too" (15%) or "not at all" (14%) important personally, the lowest level since our surveys began.

#### 4.4. Fewer than half of Americans perceive social norms for taking action on global warming.

The belief that people similar or close to you want or expect you to take action to reduce global warming – an "injunctive norm" – and the belief that people similar or close to you are taking action themselves to reduce global warming – a "descriptive norm" – can provide motivation to take action oneself.<sup>5,6,7,8</sup>

Fewer than half of Americans (46%) perceive an injunctive norm, saying it is either "extremely" (6%), "very" (13%), or "moderately" important (27%) to their family and friends that they take action to reduce global warming. Four in ten Americans (40%) perceive a descriptive norm, saying their family and friends make either "a great deal of effort" (4%), "a lot of effort" (7%), or "a moderate amount of effort" (29%) to reduce global warming.

[doi: 10.1111/j.1467-9280.2007.01917.x](https://doi.org/10.1111/j.1467-9280.2007.01917.x)

**4.5. Few Americans think it is too late to do anything about global warming.**

Only about one in seven Americans (14%) either strongly (2%) or somewhat (12%) agree that it is too late to do anything about global warming. In contrast, two in three Americans (66%) are more optimistic – they either strongly (38%) or somewhat (28%) disagree that it is too late to do anything about global warming.

## 5. Global Warming and Severe Weather

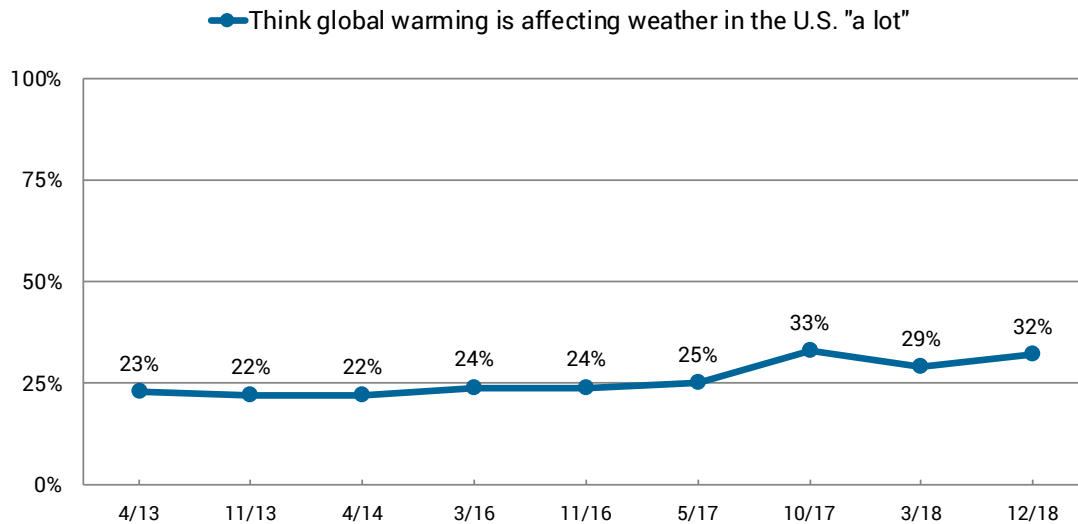

### 5.1. About two in three Americans think global warming is affecting weather in the United States.

About two in three Americans (65%) think global warming is affecting weather in the United States, including more than half (58%) who either think global warming is affecting U.S. weather "a lot" (32%) or "some" (26%).

The percentage of Americans who think global warming is affecting weather "a lot" has increased by three percentage points since March 2018. This is the second-highest level since 2013, second only to our October 2017 survey (which was conducted after a summer that included severe hurricanes, wildfires, and other extreme weather events).

## Three in Ten Americans Think Global Warming Is Affecting Weather in the U.S. "A Lot"

- Which statement best reflects your view...? (a) Global warming is affecting weather in the United States; (b) Global warming is not affecting weather in the United States; (c) Global warming isn't happening; (d) Don't know; (e) Prefer not to answer.
- If (a) selected: How much do you think global warming is affecting weather in the United States?

March 2018. Base: Americans 18+.

### 5.3. Majority of Americans are worried about harm from extreme events in their local area.

A majority of Americans are at least "a little worried" about extreme events in their local areas, including extreme heat (61%), flooding (61%), droughts (58%), and/or water shortages (51%). Fewer are worried about wildfires (41%), hurricanes (41%), and/or reduced snow pack (37%).

## Appendix I: Data Tables

**Note:** In the data tables, -- denotes that there were no responses in that cell, whereas \* denotes that the value is > 0 but < 0.5.

**(Base: Americans 18+)**

Recently, you may have noticed that *global warming* has been getting some attention in the news. Global warming refers to the idea that the world's average temperature has been increasing over the past 150 years, may be increasing more in the future, and that the world's climate may change as a result.

**What do you think: Do you think that global warming is happening?**

## Appendix II: Survey Method

The data in this report are based on a nationally representative survey of 1,114 American adults, aged 18 and older. The survey was conducted November 28 – December 11, 2018. All questionnaires were self-administered by respondents in a web-based environment. The survey took, on average, 27 minutes to complete.

The sample was drawn from the Ipsos (formerly GfK) KnowledgePanel<sup>®</sup>, an online panel of members drawn using probability sampling methods. Prospective members are recruited using a combination of random digit dial and address-based sampling techniques that cover virtually all (non-institutional) resident phone numbers and addresses in the United States. Those contacted who would choose to join the panel but do not have access to the Internet are loaned computers and given Internet access so they may participate.

The sample therefore includes a representative cross-section of American adults – irrespective of whether they have Internet access, use only a cell phone, etc. Key demographic variables were weighted, post survey, to match U.S. Census Bureau norms.

The survey instrument was designed by Anthony Leiserowitz, Seth Rosenthal, Matthew Ballew, Matthew Goldberg, and Abel Gustafson of Yale University, and Edward Maibach and John Kotcher of George Mason University.

### Sample details and margins of error

All samples are subject to some degree of sampling error – that is, statistical results obtained from a sample can be expected to differ somewhat from results that would be obtained if every member of the target population were interviewed. Average margins of error for each wave, at the 95% confidence level, are plus or minus 3 percentage points except where noted.

- December 2018: Fielded November 28 – December 11 (n=1,114)
- March 2018: Fielded March 7 – March 24 (n=1,278)
- October 2017: Fielded October 20 – November 1 (n=1,304)
- May 2017: Fielded May 18 – June 6 (n=1,266)
- November 2016: Fielded November 18 – December 1 (n=1,226).
- March 2016: Fielded March 18 – 31 (n=1,204).
- October 2015: Fielded September 30 – October 19 (n=1,330).
- March 2015: Fielded February 27 – March 10 (n=1,263).
- October 2014: Fielded October 17 – 28 (n=1,275).
- April 2014: Fielded April 15 – 22 (n=1,013).
- November 2013: Fielded November 23 – December 9 (n=830).
- April 2013: Fielded April 10 – 15 (n=1,045).
- September 2012: Fielded August 31 – September 12 (n=1,061).
- March 2012: Fielded March 12 – March 30 (n=1,008).
- November 2011: Fielded October 20 – November 16 (n=1,000).
- May 2011: Fielded April 23 – May 12 (n=1,010).
- June 2010: Fielded May 14 – June 1 (n=1,024).
- January 2010: Fielded December 24, 2009 – January 3, 2010 (n=1,001).
- November 2008: Fielded October 7 – November 12 (n=2,164).
  - Data were collected over two periods: from October 7 – October 20 and from October 24 – November 12. Margin of error plus or minus 2 percentage points.

**Rounding error**

For tabulation purposes, percentage points are rounded to the nearest whole number. As a result, percentages in a given chart may total slightly higher or lower than 100%. Summed response categories (e.g., "strongly agree" + "somewhat agree") are rounded after sums are calculated (e.g.,  $1.3\% + 1.3\% = 2.6\%$ , which, after rounding, would be reported as  $1\% + 1\% = 3\%$ ).
